Market Update as of December 31, 2023
Index Returns
During the Quarter:

- Markets rallied in the fourth quarter after a weak Q3 as investors now believe the FOMC's rate hiking cycle is over and that monetary easing is likely in 2024. Inflation declined over the quarter and has retreated meaningfully since December 2022. The consumer continues to be resilient as unemployment has remained historically low and wages have continued to increase.
 - Looking forward, the paths of inflation and monetary policy, China's economic slowdown, slowing global growth and the uncertainty surrounding the geopolitical risks with the wars in Ukraine and Israel will all be key.
- Markets posted strong results in Q4 and year-to-date with major asset classes producing positive returns except for commodities.
- The FOMC maintained the federal funds rate target range of 5.25% to 5.50% during the quarter and the updated projections from the Fed's December Dot Plot now shows an overall 0.75% rate cut in 2024.
- Equities rebounded strongly in Q4 as most asset classes were positive.
 - US equities (+12.1%) continue to outpace non-US equities (+9.8%).
 - US Small Caps outperformed US Large Caps during the quarter, but large cap stocks still outperformed by a wide margin YTD.
 - Growth outpaced Value across all market capitalizations in the US except for Small Cap.
 - YTD Large Cap Growth kept its massive lead over value (+42.7% v +11.5%). The "Magnificent 7" stocks generated more than 50% of the total gains for the S&P 500 for the year.
 - Within Non-US, Developed Markets outperformed Emerging Markets.
- Broad fixed income returns were positive.
 - US Treasury yields declined mainly due to more dovish policy expectations. The 10-year Treasury declined ~70 basis points during the quarter ending December below 4%.
- Diversifying asset classes produced mixed results.
 - Commodities were down (-4.6%).
 - REITs increased (+16.2%)

MEMORANDUM

TO: California ABLE Board
FROM: Kay Ceserani; Aysun Kilic; Inwoo Hwang;
Meketa Investment Group
DATE: April 24, 2024
RE: Review of Underlying Funds Qualifying for “Watch” Status

Summary

Meketa Investment Group (“Meketa”) has conducted a review of the underlying funds in the CalABLE Plan. The review included a quantitative analysis of the underlying funds based on specific performance criteria (as per the *Monitoring Procedures and Criteria*) as well as a qualitative analysis, including a review of organizational concerns, stability of personnel, changes in investment objectives, etc.

This memo summarizes the period from October 1, 2023, through December 31, 2023. CalABLE Plan assets were recently transferred to Vestwell, the new program manager, and invested in their offered investment options. As a result, our review for “Watch” status considers the new underlying investments’ performance history beyond the new Vestwell program’s inception date for monitoring/review purposes. At the end of the period, three passively managed funds qualify for “Watch” status (Fidelity International Index, Fidelity Emerging Markets Index, Fidelity Long-Term Treasury Bond Index).

Meketa does not recommend placing the three qualifying funds on “Watch” status as all have elevated tracking error resulting from operational causes. However, we do recommend the funds be placed on “Monitor” status. We will continue to review these funds and report any material findings to the Board. All funds listed below are discussed in more detail on the following pages.

Performance of Funds on Watch Status As of 12/31/2023

Funds on Watch Status	Board Action Date	Watch Status Start Date	No. Months Since Watch Began	Excess Perf. Since Watch Began	Plan Assets (\$M)	% of Plan Assets
-----------------------	-------------------	-------------------------	------------------------------	--------------------------------	-------------------	------------------

None

Background

New Funds Qualifying for “Watch” Status: Meketa has conducted a review of the underlying fund in the CalABLE Plan (see also the 4Q2023 CalABLE Plan Investment Performance Status Report) and determined that no new funds should be placed on “Watch” status.

Funds Currently on “Watch” Status: No funds are currently on “Watch” status.

Funds Currently on “Monitor” Status

Funds are placed on “Monitor” status when there is a quantifiable reason not to place them on “Watch” status, even though they may qualify.

At the end of the period, the Fidelity International Index fund and the Fidelity Emerging Markets Index fund, both passively managed, qualify for “Monitor” status. The two international equity index funds fall into the Caution range primarily due to “Fair Value” adjustment procedures, which increases tracking error. The Fidelity Long-Term Treasury Bond Index falls into caution range primarily due to the statistical sampling methodology used to mirror the index in portfolio composition.

Fair Value Pricing:

Some ETFs or mutual funds will use Fair Value pricing if the value of their underlying securities has been materially affected by events occurring before the US market closes, but after the close of the markets or exchanges on which the security is traded. This situation most commonly occurs with foreign securities, which may trade on foreign exchanges that close many hours before the ETF or mutual fund is priced in the US. Fair Value pricing addresses the price discrepancies in such scenarios. As a result, a divergence in a Fair Value priced asset and the index may be observed temporarily.

Sampling:

When an ETF or mutual fund invests by sampling the index, it means that the fund holds a range of securities that, in the aggregate, approximates the full Index in terms of key risk factors and other characteristics. For the Fidelity Long-Term Treasury Bond Index, the fund’s prospectus states that investments are selected through the sampling process, and under normal circumstances at least 80% of the fund’s assets are invested in bonds included in the Index. The fund also maintains a dollar-weighted average maturity that generally is consistent with that of the index. The result is that while trailing period returns are closely tracking the index, intra-period deviations can result in higher tracking errors.

Recommendation:

Although these funds qualify for “Watch,” Meketa does not recommend placing them on “Watch” given the root cause for them qualifying is operational versus a fundamental flaw with the funds’ investment processes. However, we do recommend these funds remain on “Monitor” status.
