Geocoding System

The FFIEC Geocoding Mapping System (System) helps financial institutions meet their legal requirement to report information on mortgage, business, and farm loan applications. Geocoding refers to the Metropolitan Statistical Area/Metropolitan Division (MSAAMD), State, County, Census Tract combination (address information) that must be provided for each reported loan application and the System allows institutions to enter a street address to determine the corresponding geocode. The System also provides Census demographic information about a particular census tract, including income, population, and housing data.

Please select the appropriate activity year for the address being geocoded. The tract definitions for 2012, 2013, and 2014 data are based on the 2010 Census. If it occurs that the correct activity year is selected when using the FFIEC Geocoding System
